Human Development Index (HDI), Life Expectancy at Birth, Mean Years of Schooling and Expected Years of Schooling - Selected 40 Countries

Definitions:

Human Development Index (HDI): A composite index measuring average achievement in three basic dimensions of human development—a long and healthy life, knowledge and a decent standard of living. See Technical note 1 for details on how the HDI is calculated.

Life expectancy at birth: Number of years a newborn infant could expect to live if prevailing patterns of age-specific mortality rates at the time of birth stay the same throughout the infant's life.

Mean years of schooling: Average number of years of education received by people ages 25 and older, converted from education attainment levels using official durations of each level.

Expected Years of Schooling: Number of years of schooling that a child of school entrance age can expect to receive if prevailing patterns of age-specific enrolment rates persist throughout the child's life.

Gross National Income (GNI) per capita: Aggregate income of an economy generated by its production and its ownership of factors of production, less the incomes paid for the use of factors of production owned by the rest of the world, converted to international dollars using purchasing power parity (PPP) rates, divided by midyear population.

GNI per capita rank minus HDI rank: Difference in rankings by GNI per capita and by the HDI. A negative value means that the country is better ranked by GNI than by the HDI.

Non-income HDI: Value of the HDI computed from the life expectancy and education indicators only.

Main Data Sources:

Column 1: HDRO calculations based on data from UNDESA (2011), Barro and Lee (2010b), UNESCO Institute for Statistics (2011), World Bank (2011a), UNSD (2011) and IMF (2011).

Column 2: UNDESA (2011).

Column 3: HDRO updates of Barro and Lee (2010b) estimates based on UNESCO Institute for Statistics data on education attainment (2011) and Barro and Lee (2010a) methodology.

Column 4: UNESCO Institute for Statistics (2011).

Column 5: HDRO calculations based on data from World Bank (2011a), IMF (2011) and UNSD (2011).

Column 6: Calculated based on data in columns 1 and 5.

Column 7: Calculated based on data in columns 2, 3 and 4.

THE GLOBAL HUNGER INDEX IS CALCULATED AS FOLLOWS

$$(1) \text{ GHI} = (\text{PUN} + \text{CUW} + \text{CM})/3$$

with GHI: Global Hunger Index

PUN: proportion of the population that is
undernourished (in %)

CUW: prevalence of underweight in children
under five (in %)

CM: proportion of children dying before
the age of five (in %)

Country-wise Number of and Per Capita Cases of Recorded Rape - UN Statistics

This list indicates the number of and per capita cases of recorded rape. It does not include cases of rape which go unreported, or which are not recorded. Nor does it specify whether recorded means reported, brought to trial, or convicted. Nor does it take the different definition of rape around the world into account.
